

SCOTTIE RESOURCES EXTENDS BLUEBERRY CONTACT ZONE TO 720 METRES AND 225 METRES DEPTH WITH INTERCEPT OF 34.6 G/T GOLD OVER 11.86 METRES

Vancouver, BC – March 8, 2022 – Scottie Resources Corp. (“**Scottie**” or the “**Company**”) (TSXV:SCOT; OTCQB:SCTSF; FSE:SR8) is pleased to report additional new assays on the Blueberry Contact Zone extending the strike length of the mineralizing structure to more than 720 metres, which remains open in all directions. The drilling to date, including recent high-grade intersections, notably 34.6 g/t gold over 11.86 metres and 4.43 g/t gold over 10.30 metres, indicates that the contact zone is developing into a significant gold zone with size and grade potential, as well as clear vectors to continue its expansion. Blueberry Contact Zone is located north-northeast of the 100% owned past-producing high-grade Scottie Gold Mine, 35 kilometres north of the town of Stewart, BC along the Granduc Haul Road.

“Our 2021 exploration and drill program has successfully expanded the Blueberry Contact Zone along strike and to depth. Drill results continue to intersect high grade gold over at least 700m in strike length and 225m depth.” comments President and CEO, Brad Rourke: “With the system remaining open in all directions and at depth, our 2022 program will be focused on significantly increasing the size of the zone by testing aggressive step outs along the structure. Advances made by our geological team this summer have generated highly prospective targets from detailed mapping and geophysical surveys that could extend the zone hundreds of metres along strike. With more than 15,000 metres planned, the team is busy planning for another highly successful season.”

Table 1: Selected new drill assay results (uncut) from the Blueberry Contact Zone.

Drill Hole		From (m)	To (m)	Width* (m)	Gold (g/t)	Silver (g/t)
SR21-130		16.00	18.00	2.00	2.02	2.00
	<i>and</i>	46.06	79.02	32.96	1.70	2.74
	<i>including</i>	62.93	64.06	1.13	11.4	10.0
	<i>including</i>	74.40	79.02	4.62	3.90	4.05
SR21-131		52.80	64.66	11.86	34.6	3.34
	<i>including</i>	52.80	54.28	1.48	27.4	2.01
	<i>and including</i>	59.91	64.66	4.75	77.6	7.32
SR21-132		73.30	83.60	10.30	4.43	4.86
	<i>including</i>	73.30	74.80	1.50	28.3	29.3
	<i>and including</i>	83.00	83.60	0.60	1.85	0.00
SR21-133		53.44	55.15	1.71	10.4	1.31
SR21-135		63.24	64.48	1.24	2.70	5.00
SR21-140		39.61	42.45	2.84	15.2	4.34
SR21-142		14.40	16.90	2.50	3.33	0.31

* True thicknesses of mineralized intercepts are undetermined

During 2021, the company developed a new geological model for the Blueberry Contact Zone as a property scale structural feature. Fieldwork and drilling has delineated the architecture of the system, which links several widely spaced high-quality targets along a common structure, and ultimately generates clear new targets along the projected extension. The results from the successful 2021 program illustrate that the Blueberry Contact Zone is a large-scale system that has significant expansion potential.

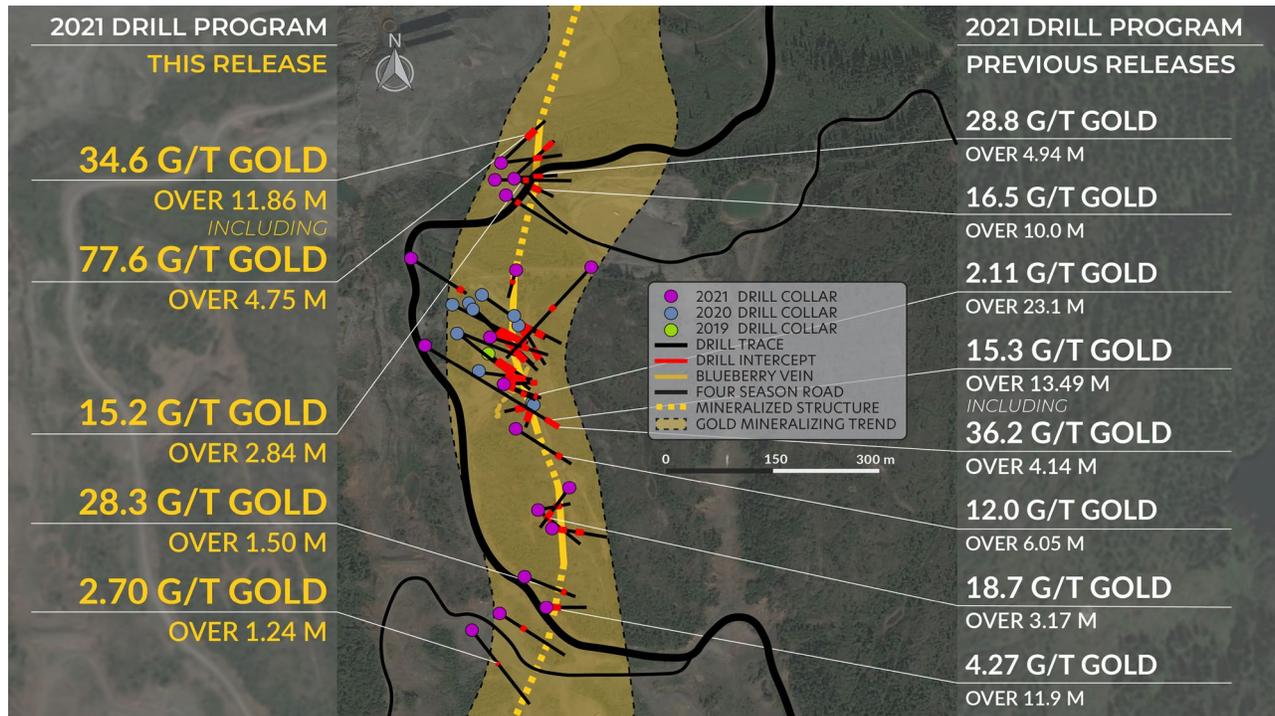

Figure 1: Overview plan view map of the Blueberry Zone, highlighting the projection of the inferred N-S mineralizing trend and drill intercepts from 2021 – gold highlighted results are from this release.

The model is based around the lithological contact between andesite and siltstone units of the Lower Hazelton Formation – the lateral extent of which is projected to continue south for kilometers and to the north towards Scottie’s high-grade Bend Vein ([January 3, 2020](#)). Scottie’s 2022 field program will continue to employ surficial and geophysical surveys to follow the structure along surface and underneath cover, in order to refine drill targets that will be tested throughout 2022.

About the Blueberry Zone

The Blueberry Zone is located just 2 km northeast of the 100% owned, past-producing Scottie Gold Mine located in British Columbia, Canada’s Golden Triangle region. Historic trenching and channel sampling of the Blueberry Vein include results of 103.94 g/t gold over 1.43 metres, and 203.75 g/t gold over 1.90 metres. Despite high-grade surficial samples and easy road access, the Blueberry Vein had only limited reported drilling prior to the Company’s exploration work. The target was significantly advanced during Scottie’s 2019 drill program when an interval grading 7.44 g/t gold over 34.78 metres was intersected in a new splay off zone of the main Blueberry Vein. The drill results received in 2020 and 2021, coupled with surficial mapping and sampling suggest that this splay is in fact a major N-S mineralized structure, of which the Blueberry Vein was only a secondary structure. This zone is much wider than pursued in previous exploration models and drilling in 2021 was

Thomas Mumford, Ph.D., P.Geo and VP Exploration of Scottie, a qualified person under National Instrument 43-101, has reviewed the technical information contained in this news release on behalf of the Company.

ABOUT SCOTTIE RESOURCES CORP.

Scottie owns a 100% interest in the high-grade, past-producing Scottie Gold Mine and Bow properties and has the option to purchase a 100% interest in Summit Lake claims which are

contiguous with the Scottie Gold Mine property. Scottie also owns 100% interest in the Georgia Project which contains the high-grade past-producing Georgia River Mine, as well as the Cambria Project properties and the Sulu property. Altogether Scottie Resources holds more than 52,000 ha of mineral claims in the Stewart Mining Camp in the Golden Triangle.

The Company's focus is on expanding the known mineralization around the past-producing mines while advancing near mine high-grade gold targets, with the purpose of delivering a potential resource.

All of the Company's properties are located in the area known as the Golden Triangle of British Columbia which is among the world's most prolific mineralized districts.
