

SCOTTIE RESOURCES INTERCEPTS 28.2 G/T GOLD OVER 4.0 METRES AND EXTENDS MINERALIZATION TO A DEPTH OF 525 METRES AT BLUEBERRY

Vancouver, BC – November 28, 2023 – Scottie Resources Corp. (“**Scottie**” or the “**Company**”) (TSXV: SCOT) is pleased to report new assays on the Scottie Gold Mine Project in British Columbia’s Golden Triangle, including several high-grade intercepts on the Fifi and Lemoffe vein zones along the Blueberry Contact as well from the C Zone. The Blueberry Contact Zone is located 2 km north-northeast of the 100% owned and royalty free, past-producing high-grade Scottie Gold Mine, 35 km north of the town of Stewart, BC, along the Granduc Road.

Highlights:

- Drillhole SR23-268 targeted the Fifi – Lemoffe – Tupelo vein zones, intersecting **8.78 grams per tonne (g/t) gold over 7.5 metres (m) and 28.2 g/t gold over 4.00 m** (Table 1, Figures 1,4,5)
 - Intercepts start at a depth from surface of approximately 160 m
 - The lower intercept occurs on the siltstone side of the Blueberry Contact Zone
- Drillhole SR23-265 targeted the Lemoffe vein zone, intersecting **5.50 g/t gold over 3.85 m** (Table 1, Figures 1,3,5)
 - Intercept of 6.50 g/t gold over 1.0 m represents the deepest intercept to date of the Blueberry Contact Zone, at a vertical depth of over 525 m from surface indicating continuity at depth
- C Zone drillhole SR23-257 intersected **4.12 g/t gold over 6.45 m** including **89 g/t silver** (Table 1, Figures 1,2,5)
 - Vein zone extends west of the Blueberry Contact Zone
 - Increased silver content (relative to gold) is consistent with other drilling in the southern extension of the Blueberry Contact Zone

President and CEO, Brad Rourke commented: “One of the key objectives of the 2023 drill campaign was to further extend the system at depth on the Blueberry Contact Zone. At the end of 2022 we had established that mineralization extended to 400 metres, and with these new results we can now show that high gold grades continue well past 500 metres. Future drilling at these depths will focus on targeting zones of increased width, aided by the structural interpretations made in the better defined near surface portions of the deposit. Drill results like these continue to establish Blueberry as an exceptional deposit, where the outcropping high-grade gold system has the potential to support both open-pit and underground mining scenarios.”

Table 1: Selected results from new drill assays (uncut) from the Blueberry Contact Zone.

Drill Hole		From (m)	To (m)	Width* (m)	Gold (g/t)	Silver (g/t)
SR23-235		349.40	351.80	2.40	1.53	0.0
		573.00	579.61	6.61	1.45	0.5
	<i>including</i>	573.00	575.00	2.00	2.63	0.0
		593.27	597.00	3.73	1.33	4.0
		621.00	622.04	1.04	3.53	43.0
SR23-257		24.45	30.90	6.45	4.12	89.0
	<i>including</i>	24.45	27.30	2.85	5.58	132
		40.05	42.05	2.00	1.20	3.0
SR23-260		15.25	16.70	1.45	1.99	17.0
		30.00	31.00	1.00	6.83	48.0
		41.00	43.30	2.30	3.05	9.9
SR23-265		412.00	413.00	1.00	7.44	7.0
		502.88	504.55	1.67	2.81	0.0
		511.00	512.00	1.00	1.36	0.0
		541.30	545.15	3.85	5.50	2.7
		563.20	564.40	1.20	1.87	0.0
		582.19	583.19	1.00	6.50	0.0
SR23-267		100.70	105.00	4.30	1.63	10.1
	<i>including</i>	100.70	102.00	1.30	3.49	12.0
SR23-268		158.80	166.30	7.50	8.78	5.2
	<i>including</i>	158.80	160.30	1.50	26.5	12.0
		197.75	201.75	4.00	28.2	17.5

*True width of the intervals has not yet been established by drilling

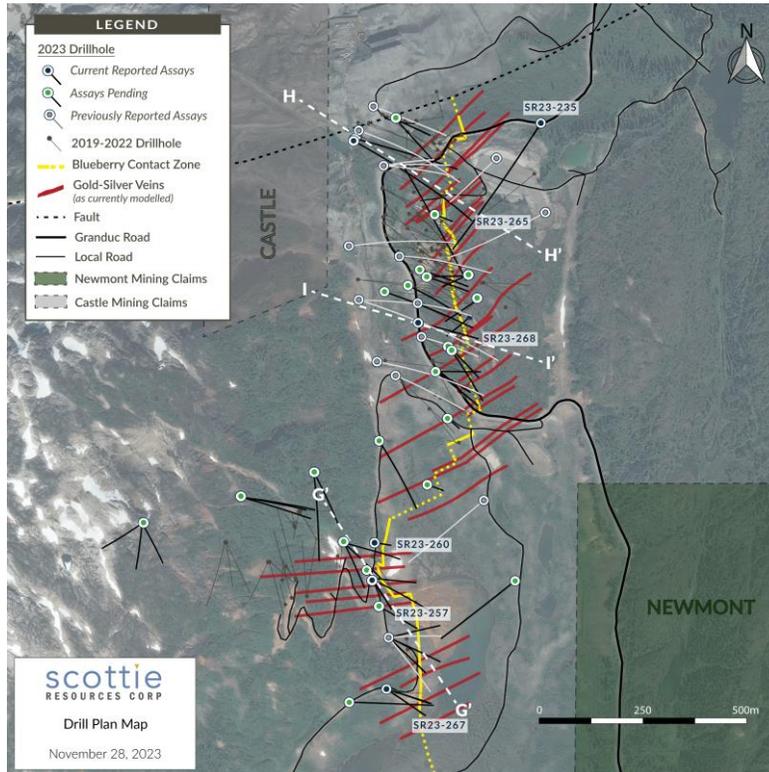

Figure 1: Overview plan view map of the Scottie Gold Mine Project, illustrating the locations of the reported drill results, cross-sections (Figures 2 - 4), and the distribution of the modelled sulphide-rich cross-structures.

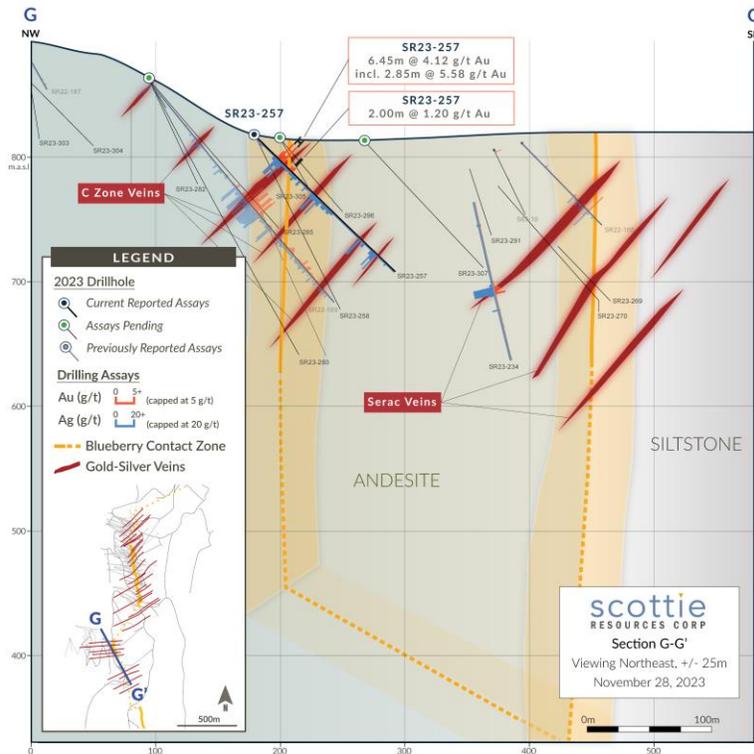

Figure 2: Cross-section displaying vein and contact style intercepts highlighted by the recent intercept in SR23-257 located in the C Zone vein portion of the Scottie Gold Mine Project. Faulting has created an apparent duplication of the andesite-siltstone contact in the area.

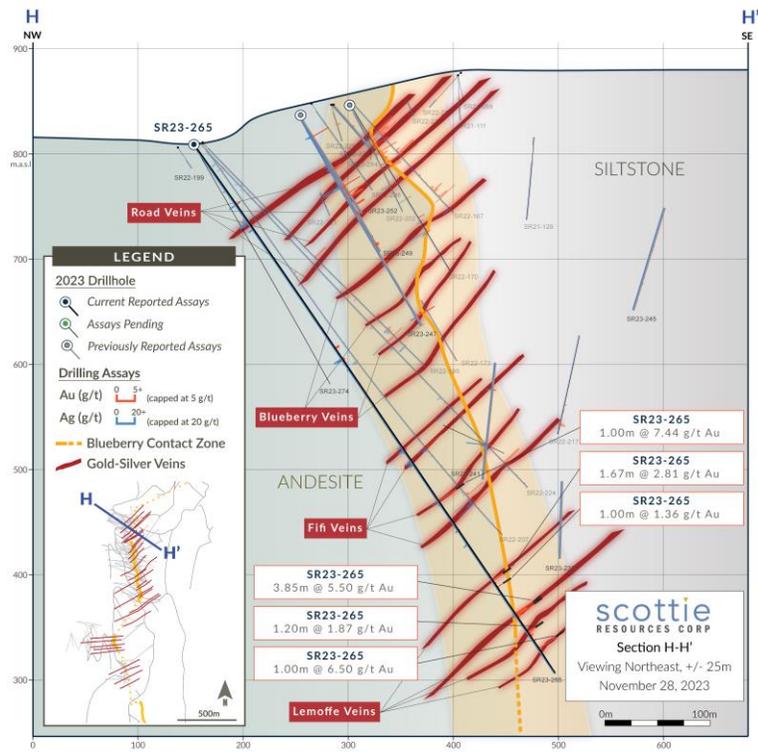

Figure 3: Cross-section displaying vein intercepts highlighted by SR23-265 in the Blueberry - Fifi portion of the Blueberry Contact Zone.

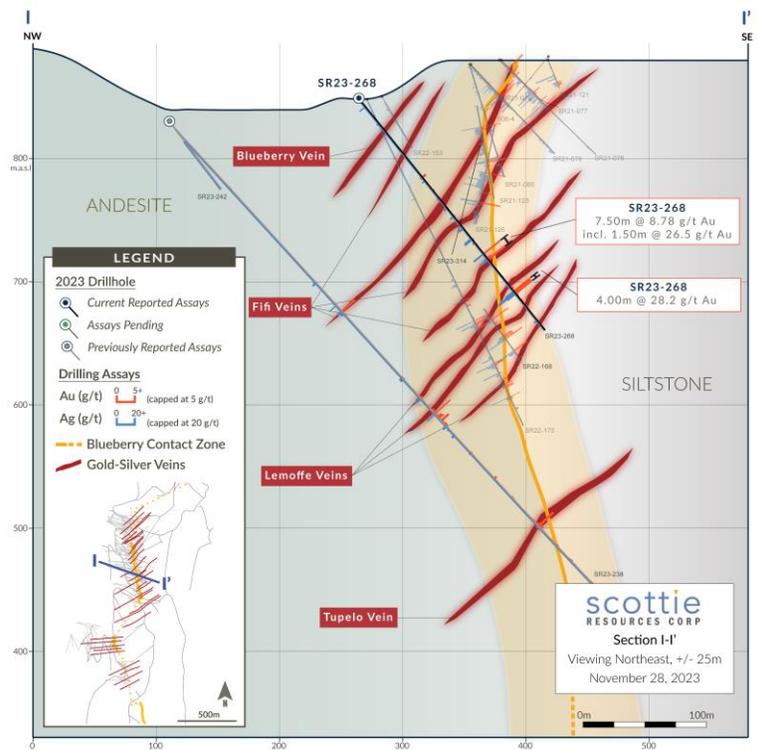

Figure 4: Cross section displaying vein intercepts highlighted by SR23-268 in the Fifi - Lemoffe portion of the Blueberry Contact Zone.

Quality Assurance and Control

Results from samples taken during the 2023 field season were analyzed at SGS Minerals in Burnaby, BC. The sampling program was undertaken under the direction of Dr. Thomas Mumford. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with atomic absorption spectrometry and gravimetric finish when required (+9 g/t gold). Analysis by four acid digestion with multi-element ICP-AES analysis was conducted on all samples with silver and base metal over-limits being re-analyzed by emission spectrometry.

ABOUT SCOTTIE RESOURCES CORP.

Scottie owns a 100% interest in the Scottie Gold Mine Property which includes the Blueberry Contact Zone and the high-grade, past-producing Scottie Gold Mine. Scottie also owns 100% interest in the Georgia Project which contains the high-grade past-producing Georgia River Mine, as well as the Cambria Project properties and the Sulu and Tide North properties. Altogether Scottie Resources holds approximately 60,000 hectares of mineral claims in the Stewart Mining Camp in the Golden Triangle.

The Company's focus is on expanding the known mineralization around the past-producing mines while advancing near mine high-grade gold targets, with the purpose of delivering a potential resource.

All of the Company's properties are located in the area known as the Golden Triangle of British Columbia which is among the world's most prolific mineralized districts.
