

SCOTTIE RESOURCES INTERCEPTS 8.28 G/T GOLD OVER 22.35 M AT P-ZONE AT SCOTTIE GOLD MINE PROJECT, BC

Vancouver, BC – November 4, 2025 – Scottie Resources Corp. (“**Scottie**” or the “**Company**”) (TSXV: SCOT OTCQB: SCTSF FSE:SR80) is pleased to report new assays from its 2025 drilling of the P-Zone within the Scottie Gold Mine Project. The road-accessible Scottie Gold Mine Project, which includes the 100%-owned past-producing Scottie Gold Mine and the adjacent Blueberry Contact Zone, is located 35 kilometres north of Stewart, BC, and is the subject of a newly released Preliminary Economic Assessment (“PEA”) (see news releases dated October 28, 2025).

“The first holes back from our 2025 Scottie Gold Mine drill program are very encouraging,” stated Brad Rourke, CEO of the Company. *“The P-Zone intercept in hole SR25-378 highlights the strength of the system and the opportunity to add ounces to the existing resource. With our PEA now released, we are focused on continuing to demonstrate the growth potential of the deposit and the value that additional ounces bring to an already compelling economic project.”*

Highlights:

- Scottie Gold Mine drillhole SR25-378 intersected **8.28 grams per tonne (g/t) gold over 22.35 metres (m)**, including 20.2 g/t gold over 7.55 m on the P-Zone (Table 1, Figures 1,2,4).
- Scottie Gold Mine drillhole SR25-383 intersected **7.76 g/t gold over 3.0 m** at the O-Zone (Table 1, Figures 1,2,4).
- Scottie Gold Mine drillhole SR25-385 intersected **4.08 g/t gold over 6.00 m** and 8.99 g/t Au over 3.00 at the O-Zone (Table 1, Figures 1,2).

Table 1: Highlight results from new drill assays (uncut) from the Scottie Gold Mine.

Drill Hole		From (m)	To (m)	Width* (m)	Gold (g/t)	Silver (g/t)	Sub Zone
SR25-378		8.10	9.35	1.25	1.41	0.00	P-Zone
		18.15	19.15	1.00	1.05	12.0	P-Zone
		68.95	91.30	22.35	8.28	4.92	P-Zone
	<i>including</i>	68.95	75.75	6.80	3.79	5.10	P-Zone
	<i>and including</i>	79.55	87.10	7.55	20.2	9.98	P-Zone
	<i>including</i>	79.55	80.70	1.15	58.0	27.0	P-Zone
		96.40	97.60	1.20	1.91	3.00	P-Zone
SR25-383		48.00	51.00	3.00	7.76	3.00	O-Zone
		71.50	72.50	1.00	2.40	9.00	O-Zone
		104.00	108.00	4.00	3.97	2.50	O-Zone
		115.00	118.00	3.00	2.31	2.67	O-Zone

SR25-385		44.90	50.90	6.00	4.08	5.67	O-Zone
		62.25	64.25	2.00	2.66	24.0	O-Zone
		99.00	102.00	3.00	8.99	7.67	O-Zone
SR25-386		83.40	89.45	6.05	2.73	0.00	O-Zone
	<i>including</i>	83.40	85.00	1.60	7.13	0.00	O-Zone
SR25-388		52.15	53.15	1.00	1.88	5.00	O-Zone
		59.00	60.00	1.00	7.30	34.0	O-Zone
		75.00	78.00	3.00	2.79	5.00	O-Zone
		83.00	84.00	1.00	5.24	13.0	O-Zone

*True width of the intervals has not yet been established by drilling

Figure 1: Overview plan view map of the Scottie Gold Mine, illustrating the locations of the reported drill results, cross-section (Figure 2), and the distribution of the modelled sulphide-rich zones.

The Blueberry Contact Zone is located just 2 kilometres northeast of the 100% owned, past-producing Scottie Gold Mine (SGM) located in British Columbia, Canada's Golden Triangle region. Historic trenching and channel sampling of the Blueberry Vein include results of 103.94 g/t gold over 1.43 metres, and 203.75 g/t gold over 1.90 metres. Despite high-grade surficial samples and easy road access, the Blueberry Vein had only limited reported drilling prior to the Company's exploration work. The target was significantly advanced during Scottie's 2019 drill program when an interval grading 7.44 g/t gold over 34.78 metres was intersected in a new N-S oriented zone adjacent to the main Blueberry Vein. The drill results received from 2020 - 2024, coupled with surficial mapping and sampling suggest that the N-S mineralized trend is a first order structure that hosts an array of SW-trending, sub-parallel, sulphide-rich veins that obliquely crosscut it which host high-grade gold. As of the end of 2024, the extent of the N-S zone, defined by the contact between andesite and siltstone units of the Hazelton Formation and the presence of the cross-cutting sulfide-rich structures, has a drilled strike length of >1,550 metres and has been tested to >525 metres depth. The Blueberry Contact Zone is located on the Granduc Road, 20 kilometres north of the Ascot Resources' Premier Mine. Newmont's Brucejack Mine is located 25 kilometres to the north.

The Company has recently completed a PEA which evaluates a low-capital DSO operation to deliver a gold-rich gravel product to Asian copper/precious metals smelters. At a gold price of US\$2600/oz the project estimates an after-tax NPV(5%) of \$215.8 M CAD with an IRR of 60.3%. By design, the operation will eliminate the need for a gold processing plant and tailings facility, thereby significantly reducing the capital required and resulting in a minimal environmental footprint, resulting in an initial capital cost of \$128.6 M CAD. The project envisages a shallow open pit on the Blueberry Zone to start, followed by underground production from both Blueberry and the past-producing Scottie Gold Mine. The PEA also evaluates a toll milling scenario through the nearby Premier Mill, which results in an after-tax NPV(5%) \$380.1 M CAD and an IRR 89.9%.

Quality Assurance and Control

Results from samples taken during the 2025 field season were analyzed at SGS Minerals in Burnaby, BC. The sampling program was undertaken under the direction of Dr. Thomas Mumford. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with atomic absorption spectrometry and gravimetric finish when required (+9 g/t gold). Analysis by four acid digestion with multi-element ICP-AES analysis was conducted on all samples with silver and base metal over-limits being re-analyzed by emission spectrometry. Core was ½ split and assayed at NQ diameter.

Dr. Thomas Mumford, P.Geo., non-independent and President of the Company, a qualified person under National Instrument 43-101, has reviewed and approved the technical information contained in this news release on behalf of the Company.

ABOUT SCOTTIE RESOURCES CORP.

Scottie Resources holds 100% interest in the Scottie Gold Mine Property, which includes the high-grade, past-producing Scottie Gold Mine and the adjacent Blueberry Contact Zone. The Company also owns a 100% interest in the Georgia Project, host to the past-producing Georgia River Mine, as well as the Cambria, Sulu, and Tide North properties. In total, Scottie controls approximately 58,500 hectares of highly prospective mineral claims within the Stewart Mining Camp in British Columbia's Golden Triangle—one of the world's most prolific mineralized districts.

Scottie's current resource estimate on the Scottie Gold Mine Project includes a total of 3.6 million tonnes grading 6.1g/t for an estimate of 703,000 gold ounces (Inferred category), highlighting the potential for a significant near-surface, high-grade deposit. The Company's strategy is to continue

expanding this resource and to define additional mineralization around past-producing mines through systematic drilling and surface exploration.

The Company has recently completed a PEA for the Scottie Gold Mine. The PEA outlines a robust Direct-Ship Ore (DSO) development scenario with strong economics and significant upside through a potential toll-milling option utilizing excess capacity at the nearby Premier mill. The base case DSO project delivers an after-tax NPV(5%) of \$215.8–\$668.3 million at gold prices of US\$2,600–\$4,200/oz, respectively. Under the toll-milling scenario, project economics improve substantially, with an after-tax NPV(5%) of \$380.1–\$831.7 million (no agreement currently in place). The PEA estimates initial capital costs of \$128.6 million, average annual production of ~65,400 oz gold over seven years, and a payback period of 1.7 years for the after-tax DSO case—reduced to just 0.9 years under the toll-milling opportunity at US\$2,600/oz. The NI 43-101 Technical Report on the PEA is expected to be filed within 45 days.
